DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ulmer (6,138,894) in view of Tsujino (6,299,015). Ulmer et al. teaches applying pressure and heat to solder bumps, formed on both or one of a connecting pad of a semiconductor element or a connection pad of the wiring board for connecting the solder bumps under a state that the solder bumps are in contact and fused while a ultrasonic head is moved (Figure 3, item 50 and Figure 4, items 52 and 54). Tsujino teaches the bond head is moved in a plurality of directions (Column 2, Lines 30-55). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the method of Ulmer et al. to utilize the bond head movement in order to provide an excellent bond (see Tsujino Column 2, Lines 19-35).

With respect to Claim 2, the teachings of Ulmer and Tsujino are the same as relied upon in the rejection of Claim 1 as applied above and further in view of Kuriyama (5,315,474). Kuriyama teaches an inactive atmosphere or a reducing atmosphere is formed during bonding (Column 5, Lines 15-45). It would have been obvious to one of ordinary skill in the art at the time of

Art Unit: 1725

the invention to modify the combined invention of Ulmer et al. and Tsujino to utilize the particular gas in order to prevent oxidation of the bonding surfaces.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
